

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

5. Project Development Phase

College Project Documentation

5.1 Development Steps

Step 1: Create the standard laptop request/catalog item. Step 2: Add mandatory request fields. Step 3: Configure the requester and approval information. Step 4: Open Flow Designer and create the automation. Step 5: Define the trigger for a new standard laptop request. Step 6: Add validation and approval actions. Step 7: Add the approved path to create procurement/fulfillment tasks. Step 8: Assign tasks to the correct group. Step 9: Add status updates and notifications. Step 10: Save, activate, and test the flow.

5.2 Flow Logic

Trigger: Standard laptop request submitted. Condition: Request is complete and belongs to the standard laptop process. Action: Request approval. Decision: Approved or rejected. Approved path: Create task → Assign team → Notify → Track completion. Rejected path: Record rejection → Notify requester → End.

5.3 Testing Scenarios

Test Case	Expected Result
Valid request + approval	Fulfillment task is created and request progresses.
Valid request + rejection	Fulfillment does not proceed and requester is notified.
Missing mandatory field	Request cannot be submitted or processed.
Incorrect assignment condition	Issue is detected during testing and corrected.
Task completion	Request status reflects the completed fulfillment stage.

5.4 Development Result

The completed configuration provides a structured automated process for standard laptop procurement. The flow reduces repeated manual routing and creates a consistent sequence of approval and fulfillment activities.
